Geometry emerging from discrete structure: $\mathbf{v}(t) = (1-t)\,\mathbf{v}_{\mathrm{flat}} + t\,R\,\hat{\mathbf{v}}$ $\mathbb{Z}_3$ color preserved $\forall\, t$
$t = 0$: **Discrete $\partial\mathcal{S}$**
$t = 0.33$: **Inflating**
$t = 0.70$: **Nearly smooth**
$t = 1$: **Continuous $S^2 \sqcup S^2$**
R (phase 0)
G (phase $2\pi/3$)
B (phase $4\pi/3$)
$\bar{R}, \bar{G}, \bar{B}$ (T_-)
